

DoVera
Surgical Light

Suited for any surgical application, Skytron's DoVera provides superior illumination while eliminating glare.

Reduced Eye Glare

DoVera's unique Double Reflection technology eliminates glare at the lighthouse and provides uniform light across the surgical field. High intensity LED light beams project onto a segmented mirror, which reflects the light onto a smooth second mirror and subsequently to the surgical field. Double Reflection eliminates glare produced by traditional direct lighting technologies.

Personalized Lighting From Spot Size to Color Temperature

Capacitive touch control at the yoke allow for easy, personalized set up of the light. Three spot sizes provide the right amount of light for every procedure while the seven color temperature options create a range of options from soft to bright white light. The surgical team can adjust the intensity to their preference throughout the procedure via the sterile center handle. Optional wall control available for adjustments outside of the field.
